Make sure you installed MASM correctly and that you can run/debug you're a simple assembly language.
Run the following calculations using MASM and assign the result to the same or different registers. Share a screenshot showing the content of the register. You may use memory locations if you know how.

- 4 + 5 * 2
- 12 −1
- −5 + 2
- (4 + 2) * 6
- 16 / 5
- − (3 + 4) * (6 − 1) − 35
- − 3 + 4 * 6 − 1
- 25 MOD 3

Submit a copy of your code and a screenshot of the registers after each operation, or if you saved the result in different registers, just use one screen shot
